

PROJECT BACKGROUND

As global efforts to combat climate change and reduce harmful CO2 production ramp up, our project will play an important role in decarbonising industry, especially the whisky sector, within Moray. The proposed development would form part of the Scottish Government's Hydrogen Action Plan and vision to create fourteen regional hydrogen hubs across the country, with Moray being one of those hubs. Our plans align with Moray Hydrogen Strategy to develop a local hydrogen economy that will:

**REDUCE
GREENHOUSE GAS
EMISSIONS**

**IMPROVE
SECURITY OF
ENERGY SUPPLY**

**INCREASE AND
MAKE BETTER USE
OF RENEWABLE
ENERGY
GENERATION**

**CONTRIBUTE
TOWARDS THE
DECARBONISATION
OF LOCAL
INDUSTRY**

Our development will help to safeguard the distilling sector, which we know is of huge cultural and economic significance to the area. By supporting local whisky distilleries to take advantage of the hydrogen opportunity, we are futureproofing businesses by ensuring they are on track to meet their own sustainability and net zero targets. It will create new highly skilled, high-value jobs during the construction and subsequent operation of the facility.

**HYDROGEN WILL PLAY A KEY
ROLE IN MAINTAINING UK
ENERGY SECURITY AND IN
ACHIEVING MORAY, SCOTTISH
AND UK GOVERNMENT NET
ZERO TARGETS.**
